Summary: Now with many children lost with a simple fairy tale of the bird version; that makes a lot more sense this way.

Start with bees and the pollen, from the flowers the pollen comes from th
Which all grows in mother earth, which then gives the unconditional love
good helps us grow.
Now the bee is like a man, and man has to find flowers (women) too colle
Each flower is different, and so the bee has a choice of which flower to g
from.
Each flower will make a different sort of honey for the bee, and yet for e
fussier.
Women will like a certain sort of pollen that the bee can give her, yet th
flowers and from what the bee learns it helps tech the flower by sharing
plant, for the whole process of making fruit together when fully grown.
This is either honey (wisdom of unconditional love) for the bee, which is
and all they live for is to make honey and more young.
The female being a plant is trying to make fruit when grown, and a good
good bee doesn't damage the flowers on entrance or leaving.
A bad bee will be clumsy and leave a mess, so the flowers can't even tak
again.
So in this process we see the circle of life unfolding as the bee enters th
fertilised, with pollen it carries, from wisdom it has learned.
This then makes the flowers pregnant and it will produce seeds, which th
the bees to fertilize.
Then for the bee's they have more plants, and the plants are happy as th
and produced offspring.
Yet you see there are many things that can go wrong, like a big bumble b
flower, it doesn't work like that and we see what happens.
Many of the bees got slightly confused, with the fact no one explained it
so the flowers turned into a Venus fly-trap and seduced the bees, yet ne
So if every flower, realized it is a flower and as such Bees are attracted
and if a bees set the mind on a certain flower, they will try very hard to
Remember a bee is never a wasp and wasps live in fig trees! Not flowers
it stings more then once as a bee can only sting once.
So in other words, if it doesn't treat the flowers and the plant with respe
It shouldn't be entering a flower, until it's a fruit as they are for bees, a
Wasp's get like a puppet; when the season comes for this, so be aware a
find their own fruit or learn at least to be wise, like the bee to make som
Also remind us that a bee can't be in two flowers at the same time and n

Also if a bee realizes every flower wants you for one thing and that is to
and spread a little pollen about, being magic in life, the result are a clo
For if the bees fetches far distant pollen from a similar species, it makes
whole world to share and makes more beautiful flowers and bees, and les
attack everyone from there own fear.
Yet in saying that if you leave a wasp alone, it is far safer and many of
nests, being the fig and so now it is sort of many bees have got skinny a
more like wasps as well.
This is maybe to say to all and especially children are free in this life, a
special, where man made it bad.
Where and when do you see the bees and birds mix? They don't, and we
and girls are distinct.
Its one love, never two, and God loves all, and is not a man or woman, a
beyond wisdom to begin with and then the magic that makes life work it s
Now within our current way of life that man made for ourselves, we have
shows.
One is that the plant is there to grow flowers make a space for its self a
harvest.
As in each flower it produces a fruit, yet if one flower is removed while t
flowers will grow to produce the same fruit from the plant it self, and rea
circle life being God.
So when we have more fruit, even from different plants species, it makes
some ways, yet they may grow different sorts of fruit that can react with
in mixed race families..
Yet where they harvest is the big part, as in our current lifestyles, we ha
is still young.
This means as they all grow in the space, the light is taken up by the mo
out on some of the light they should have received if the plant started at
trees do.
As then what happened are the fruit drops away from the mother and the
mother slowly dies as all plants do one day.
The energy of the mother is given back in the soil; as she falls, the youn
growing in the true light and not half of the mothers light can hold her w
Yet when all the young grow next to the mother, eventually they will kill
how to keep the distance as well.
This we also see with the bees as they being foolish and young often mo
good idea you may think...
Yet as the plant grows it has a big hole where the wasps take up space t
of where pollen stems from being the roots (wisdom of God).
So maybe wasps should learn to make crystals from unconditional love as
in hives; where they belong!
The wasp not in others peoples houses, scrounging every last bit of polle
isn't any?
So go to other plants looking for more pollen and kill the plant they live
much.
This is also the ways of heaven on earth, as it was to begin and God pla
Man changed it after for them self's?

Now instead of flowers excepting the perfect bees, they except anything

was meant for that one flower; to be perfect and to make much fruit betw
as one big family can, and one world can!
Yet when people say (I am) this is where they miss the plan.
