Ok load has changed and been edited, FireFox now runs faster....

Just on [Java Script](#) file is Included and then repeated for each Block used as a the [Smarty](#) fills the data.

Allot of that has been explained <http://www.xtremephp.org> by me, yet more is still possible

The userbar now calls the other items within it for different user groups my home server was loads faster (still [Smarty](#) can't be replaced in a [Java script](#) faster [HTML](#)

The [CSS](#) has all gaps removed (more or less as [Jared](#) said that it's the the contents to display it as quick as possible.

Will have to make list of some of these bits and some better guides on h

Also plan to make some themes like this site is now using where the site content load speed.

Also added better .htaccess file to gzip the site and keep track of people hopefully now all is fixed so much and still more..... people will stay

and make this place a home??

Decreased size again of all themes to [HTML](#) and then [CSS](#) including any items that call the system [Java Script](#) blocks
