There are no theories in the western world that can explain the origin of manner. Neither creationism nor ID nor Evolution.

As a matter of fact, true evolutionism is not concerned with the "origins"

The reason why these theories fail is because they consider time as a "s "beginning" to an uncertain future. The problem is the "beginning".

The Eastern world already figure out that problem, instead of a "straight cyclical. Then you don't have the problem of the "beginning" but rather a eternal, eternity means cyclical and cyclical means repetition. Just like cyclical, so time is the same. These ideas support scientific laws such a energy/ matter, the second law of thermodynamics and even some aspect when it deals with time/space.

The short answer: No, humans don't come from monkeys...

It is time to be sensible. If a theory cannot explain the "origin" of the un way, how can it successfully explain the "origin" of a human? or a monkey
