Who was created first the chicken or the egg? ( and most important:WHY

"The problem of the origin of the universe is a bit like the old question: or the egg." - Stephen Hawkins

Philosophers and Scientists treat this question as a conundrum. The belief is a "straight line"; from a nebulous beginning to an uncertain future. This is to consider time as being curved, a circle. Then, around this circular time there is before an egg and an egg before a chicken. Time is cyclical and predestined. Past and future are relative to a point of reference (Einstein). There is no creation and nothing is changed. "Matter is not created nor destroyed, it only changes". This is neither beginning nor end in eternity.

Evolutionists and Creationists cannot explain the "beginning" in a rational way. A "supernatural beginning" which is not consistent with the first law of conservation of energy. Others talk about a big explosion, not realizing that something had to cause the explosion. "Cause and effect" cannot be ignored or used only when convenient. If matter cannot be created, the logical solution is that matter always existed. This logical solution is fully consistent with the laws of physics and time which is well known by Eastern cultures, which by the way; are the most advanced (with quite a bit of wisdom and knowledge as we in the west are finding out). The three aspects of time; past, present and future must be present in all time. Time being movement from being to becoming cannot be linear, cannot be divided. When we think about a "beginning" we are not following this logical thought. The western world has chosen to ignore this view and rather follow contradictory ideas.

God is in the realm of the unlimited. God being beyond physical matter and space. All. God is an incorporeal entity, a soul, just like we, humans are souls with a body, though we may believe that we are bodies and because of that "illusion" (duality of matter.)

It is quite impressive that in this age of technology and knowledge of how things work, we still believe in traditions and contradictory ideas which logic and reasoning cannot explain. We aren't open minded to knowledge but instead choose the more convenient path, even though irrational.
