Other than the fact that I met you in cyberspace the last cycle... No, I

something that was found in another site about the origin of the universe

<http://www.unexplained-mysteries.com/forum/4.html>

"....well hydrdogen is not just hydrogen, its a proton and an electron, so electrons are the begining of everything, however protons and electrons basically quarks are responsible for the beggining of everything, however can be further broken down, all the way down to strings, which are in ess loops of vibrating energy, and if this is true, then the energy that can ne destroyed is the beggining of everything, and if that is true, than that m and always will be, infinite, and never actually had a begining in the first

Obviously he/she meant "eternal" rather than "infinite."

Since logically if matter cannot be created neither destroyed, whatever e cannot add / substract things to it, so it is not infinite.
