Like wise it is nice to talk to someone who is educated!

What I mean in terms of symbiosis is not just the way we interact.

Yet many things with in nature I.E.

We breathe out carbon dioxide and plants need it to grow, Plants change in the day, when we need it to breath and a night carbon dioxide, so as t

Plants need phosphates and nitrates to grow, our bodies convert what we pure waste yet we make what plants need to cultivate.

So how could these have come about, unless it was intended?

In other words the painter had a Good idea, of what it was painting before

This is the bit that gets me, I saw on a documentary about rain forests.

Leaves fall off the trees, and then something large eats them, gets rid of smaller then eats the waste, then something smaller. Till it is reduced down then the fungus absorbs what is left and then the trees feed through the whole forests energies back in a full circle.

Now that is clever, so if that occurs here that all matter is recycled Also we now know that it does in the universe i.e. black holes absorb de ultra violet light, which isn't matter.

Unless you know any other scientific discovery to where the matter goes black hole? As that is a lot of energy, that you would think needed to be

That's here in this picture, yet to truly answer this question, we have co what created the basic forms of atoms and structures, that all of this is. You see the painter is infinitely logical as this appears prearranged, for chance especially atoms is illogical, as I see it.

Also if you re-read what I put in the lines post, I was describing how God beginning, I am not naively saying God is eternal, as God must have come taken my head to many levels out side of consciousness, to try and stick understand and still there is more. If that makes sense questioning each what made that if that made that, ECT.

It's like even if we were in the matrix and it was a computer system, som

and who made them, and who made that.

We have to find somewhere to end this and so we can find a beginning, a spoke in the lines post.

As this is the way cells form and many microscopic organisms and if you the small things that make the big things. So if something interacts on a does on a larger level on many occasions.

Any way I am going off track trying to explain and I am getting tired, yet

Peace N love B with U
