Okay, that really ends like a sales pitch. That is not what I meant it to be. Working with has a mission. That is to let people know how toxic many of our products are. Here is some information from an article written by By Dr. George C. Toxicologist/Analytical Chemist/Microbiologist  
Founder of the International Academy of Wellness

"More children under four die of accidental poisonings at home than are killed in traffic accidents at home. The average home today contains more chemicals than were found in a chemistry lab. Go into your kitchen and your bathroom and look under your sinks and behind your medicine cabinets and personal care supplies. What have you found? Window cleaner? Bleach? Dish detergent? Shampoo? Toothpaste? If you read the label on toothpaste, it will tell you it contains fluoride, a toxic paste!

These products can be violent lethal poisons with the potential to kill or maim. Most dishwashing detergents include naphta, which is a central nervous system irritant, diethanolamine, a possible liver poison, and chlorophenylphenol, a metal irritant. These are considered a toxic substance.

Of all chemicals commonly found in homes, 150 have been linked to allergic reactions and psychological abnormalities. We have a higher rate of kids with cancer than ever. If that doesn't say we're doing something wrong in our environment, I don't know what takes! According to the American Cancer Society, there has been a 26 percent increase in cancer over the last 2 decades!

You should also be concerned about the air that you and your children breathe. Many cleaning and some personal care products release toxic vapors into the air when they are used and when they are stored. Children may be particularly vulnerable to chemical pollutants in the air per pound of body weight than adults, and because pollutants are generally heavier than air, they collect closer to the floor, small children breathe greater concentrations than adults.

This also includes our beloved animal companions. What are we doing to protect them?

I just want people to think about what products they are using, and find safer alternatives.

If you are having trouble finding quality products, at a decent expense, contact me for information about a company that cares. Any personal information you give me will be kept CONFIDENTIAL.
