Other than the fact that I met you in cyberspace the last cycle... No, I found something that was found in another site about the origin of the universe

<http://www.unexplained-mysteries.com/forum/index.php/t41064.html>

"....well hydrogen is not just hydrogen, its a proton and an electron, so electrons are the begining of everything, however protons and electrons are basically quarks are responsible for the beggining of everything, however quarks can be further broken down, all the way down to strings, which are in essence loops of vibrating energy, and if this is true, then the energy that can neither be destroyed is the beggining of everything, and if that is true, than that matter and always will be, infinite, and never actually had a beginning in the first

Obviously he/she meant "eternal" rather than "infinite."

Since logically if matter cannot be created neither destroyed, whatever energy cannot add / subtract things to it, so it is not infinite.
