Good questions.

I believe I understand what you mean.

When you ask the question: "What caused it to exist?" You are asking for an important, a particular point in time. It is the same if you believe that the existence of the universe. What caused it to exist? How hydrogen and helium exploded? who made them in motion? and more important, what existed before those things and so on ...ad infinitum... The same holds true if you believe "being" created the universe. What caused it to exist? and before the existence? Some respond: There was nothing. Why it had to be something? If nothing existed? God? and If God was there, then "nothing" never existed... besides who came into existence?

Why it is easy to say " God is eternal", meaning God has no beginning and end, but then it is so difficult to understand that matter has always existed as energy affirms.

As far as thinking that existence has a reason or a utility is just a matter of not caring for anything unless you find a meaning to it. A painter painting the biggest mess, however; for some it will be called art. What I see with matter exist but a perception of it through my physical senses. An incomplete picture at a particular point in time, which will change as time passes by in interaction. You call it symbiosis because you see differences between entities, I may call it that something cannot exist by itself.. it is the same matter in different aspects. Ying -Yang. You can perceive both polarities as opposites. I can perceive both. someone may say: " they are both, complementary and opposite at the same time, that THAT cannot be. You can only be one thing but not the other at the same time before, ALL depends on your stage of consciousness.

Mathematics is just a way to interpret the world around us, the physical laws, the physical laws. Mathematics cannot go beyond that, it is very limited. Mathematics is about what is beauty, for instance; however, we have experienced it. It is about the mind beyond is about soul consciousness rather than body consciousness. Thank you for such an interesting talk.
