Why do humans and primates have a defective GULO gene in their livers of ascorbate synthesis, forever damning them to hypoascorbemia, while 9 are not so afflicted?

Great question one for the ages - i'm still trying to figure out why we [all] in same fashion - why some of us would not just breath and take in Nitrogen Oxygen - exhale the rest.

Maybe God's genetic blueprint can only vary so much?

Keep breathing live awhile - be sinless live forever.
