We can show reality is like being inside a universal super computer; where (God) is like a Universal Central Processor (CPU).

The Periodic Table is all mathematically equatable, and is made of multiple elements. At an atomic level, the very structure of reality is all maths. Whether at an atomic structure, and a lot of space; which basically means what we know we're inside something like a holographic universe.

We can show that there is a central Source to reality, from the Fibonacci sequence to everything; so things like a finger print, snail shell, ocean wave, galaxy, etc. are all based on a uniformed mathematical principle, formulating the very way that reality is structured.

If the universe was random with no central Source, then the very foundations of reality would be random; yet they are not - Most of our reality can be shown to be mathematical. What we call random, is often that we don't have the amount of time & variables to see that there are mathematical patterns formulating everything.
