If God is like a CPU, does that make God impersonal & distant?

Whereas some people have a concept of God as a being, which is often based on a desire to personalize God; where often they will make God in their own image within the fabric of our reality, for our reality to be made by God.

If we look at the fabric of our reality, we can see it is all mathematically structured. At the atomic level, we can see everything is mathematically structured.

The Fibonacci Sequence is interwoven into all of reality, and so we can see the Source creating universal mathematics.

Now though we can show God would be equatable to 100% mathematical perfection, it doesn't mean that God didn't invent unconditional love & wisdom, as we see through the universe.

Just because God is beyond the fabric of our reality, it can not be God is the Source of reality at a quantum level; it is like we're in the literal living word, manifesting all of our feelings, and knows everything about us, more than we know.

Why does it say man was made in the image of God (Elohim), as the word Elohim (H433); which is clearly a different word to El (H410) - the additional H is the breath breathed by El i.e the living word, breathed by God.

Thus an Elohim (H430) is like the word Avatars, it means 'a being that has a Divine'.

There is a statement in the Quran, 'that the God Most High (El Elyon - Allah) is not above our own jugular'... When we recognize God isn't detached from reality, yet is the source of everything - then we realize everything is literally being made by God right now.
