The idea that people argue religion Vs science is silly, as both are tryin
is, and because of dividing the subjects people have null answers, and t
answers, that it is all true or all false.

God can be proven from science, and it is because of wonky equations w
people don't know this.

The Periodic Table is made from mathematical formula, that show our rea

Within the Periodic Table it isn't random mathematics, where elements &
fluctuating, as we've been taught - it is a random universe, it is static m
consistent for billions of observable years.

When we can show our whole reality is made from a mathematical system
from, if there was no reason for it formulating into something complex, w
of quantum soup, there is no reason for it to formulate into complex mat
atomic level, as there is no reason for maths to even exist.

When we get our head around the idea that we're inside something like a
where there is more space in atomic structures, than there is mass... Ne
is a central Source to the mathematics i.e. God.

The idea that the Fibonacci sequence is interwoven into the whole reality
finger print, an ocean wave,a galaxy spiral proves that the maths came
be universally the same at all levels of reality.

Often people start with the big things to prove God, like in the Intelligen
actually often defeats the proofs, as why would a Good God make evil an
microscopic level, we can show that the building blocks for any of this to
mathematical formulation.

For me God is like a Universal Central Processor (CPU), and some of the
religion, actually put us off discovering that God is right here in front of
the equations we see around us.
